

Engineer with 3+ years of experience building distributed systems at scale, now looking to bring that technical foundation into a solutions engineering role. Throughout my career I've consistently gravitated toward the customer-facing and cross-functional side of the work, serving as a technical liaison between engineering teams and non-technical stakeholders. I do my best work at the intersection of engineering and people, and I'm looking to make that the center of my career as a solutions engineer.

Skills

- ❖ **Languages:** C#, Java, Python, JavaScript/TypeScript
- ❖ **Backend & Architecture:** .NET, Microsoft Orleans, Spring Boot, REST APIs, Event-Driven Architecture, Microservices
- ❖ **Cloud & DevOps:** AWS, Kubernetes, Docker, Rancher, Bamboo CI/CD
- ❖ **Data & Messaging:** SQL, T-SQL, MySQL, Snowflake, Redis, RabbitMQ
- ❖ **Frontend:** React, MUI
- ❖ **Monitoring & Tooling:** Datadog, Git, Jira

Work Experience

DraftKings, Software Engineer (remote) May 2025–Feb 2026

- ❖ Engineered and maintained over 15 distributed microservices for DraftKings DFS platform, ensuring robust performance for 500k+ peak daily users across high-stakes, time-sensitive workflows.
- ❖ Designed and supported REST and event-driven systems using RabbitMQ for reliable communication across a complex, multi-service architecture
- ❖ Implemented Redis caching and feature flagging to improve performance, enable safe rollouts, and support rapid experimentation
- ❖ Led a cross-functional effort to support Shohei Ohtani's dual-role player scenarios in DFS workflows, identifying an edge case that impacted user experience and driving it to resolution
- ❖ Participated in on-call incident response, triaging and resolving production issues to maintain reliability for a large consumer-facing platform

SRC, Software Engineer Oct 2023–May 2025

- ❖ Served as the primary technical liaison for TrackSync, partnering with engineering, subcontractors, designers, and program leadership to gather requirements, define integration specifications, and communicate progress to both technical and non-technical stakeholders
- ❖ Built and optimized backend data pipelines in Java and Spring Boot to reliably process approximately 350,000 tracks per minute in a real-time operational environment
- ❖ Developed responsive user interfaces with React and MUI, directly improving usability for operational end users
- ❖ Developed features for COMET, an end-to-end web application streamlining Marine collection management workflows

Swampfox, Product Development Intern May 2022–Aug 2022

- ❖ Designed and built SFValid, a plug-and-play debugging tool enabling call center representatives to rapidly diagnose system issues
- ❖ Implemented automated call workflows that streamlined customer-facing support operations, translating business requirements into technical solutions that improved team efficiency
- ❖ Served as the technical liaison between stakeholders and the development team, translating feature progress into business terms and ensuring alignment between product and engineering teams

Marsh McLennan, Software Engineering Intern (remote) May 2021–Aug 2021

- ❖ Collaborated on backend development for an AI-driven customer quoting system using Python/Pandas
- ❖ Built data processing pipelines to ingest and transform large datasets, improving data reliability and workflow efficiency
- ❖ Applied ML clustering algorithms to support customer segmentation and quote generation
- ❖ Analyzed and presented statistical insights, supporting data-informed business decisions

Education

B.S Computer Science, University of South Carolina

GPA: 3.8|President's list

Theta Tau, Professional Fraternity

Fall 2019 - Spring 2023

Columbia campus
